## Wiring Diagram

## **HALOGEN LAMPS**

The halogen lamp assemblies are 12 volt, 20 watt halogen bulbs. There are two light settings; normal, and dim. These two settings are controlled by the step down transformer

#### **LIGHTS**

NOTE: Turn off the lights and fan. Allow the lights to <u>cool</u> before handling. If new lights do not operate, be sure lights are inserted correctly before calling service.

#### Halogen Light Replacement

- Using a flat edge from a screwdriver or equivalent tool, pry loose the lens cover as shown in Figure
  3
- Remove the damaged light and r eplace with a new 12 Volt, 20 Watt (maximum) halogen light made for a G-4 base. Follow package directions and do not touch new light with bare hands.
- · Reinstall the light and cover.

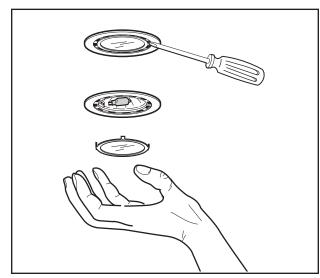

Figure 3

## **Infra Red Heat Lamps**

The infra red heat lamps are 120 v.a.c. 175 or 250 watt lamps.

- Turn heat lamp counterclockwise to remove.
- Replace lamp with either a PAR-38 175W heat lamp or a PAR-40 250W heat lamp.

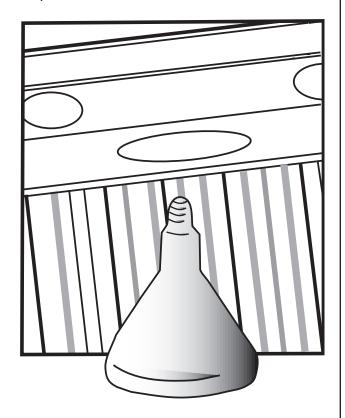

The PAR-38 I75W heat lamp provides a tighter seal within the enclosure and produces the same amount of effective heat with lo wer energy consumption. These lamps may not be readily available at local retail outlets. The PAR-40 250W heat lamp is r eadily available at local retail outlets.

To order PAR-38 175 heat lamps with a credit card, phone:

- OpTechInc. 800-848-6624 or
- www.bulbs.com 888-455-2800

#### **A** Caution

DO NOT TOUCH THE BULBS IMMEDIATELY AFTERUSE. THEBULBS WILL REMAIN HOT FOR SEVERAL MINUTES. DO NOT PLACE HIGHLY FLAMMABLEMATERIAL ON WARMING SHELVES.

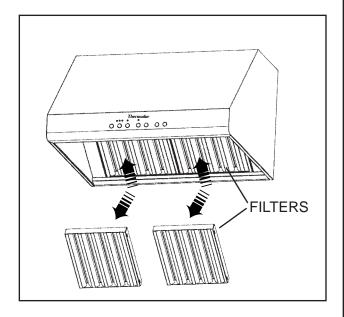

## **Filters**

The metal grease filters are made of anodized aluminum and are long lasting.

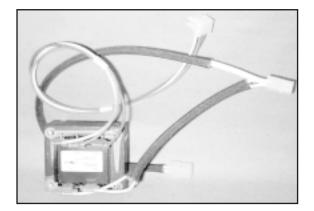

#### To Remove The Metal Gease Filters

- Turn the fan and lights off.
- Allow filters to cool before removal.
- In the following order remove the baffle filters, trims, and grease troughs.
- To remove filters, push up then pull do wn as shown in Figure 2.

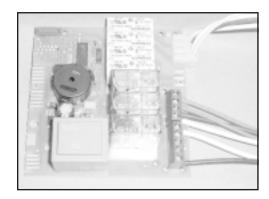

## Step DownTransformer

The step down transformer is a multiple tap 120 v.a.c. step down transformer one tap outputs 12 v.a.c. for regular lights, and the other tap outputs 9.6 v.a.c. when the dim light is selected.

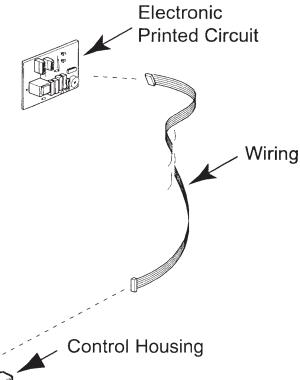

## Main Relay Board

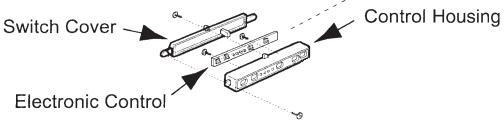

The main relay board is a microproccessor based printed circuit board. The relay board has specific relays to activate the components in the hood. The relay board reacts to input and commands from the input board.

## **InputBoard**

The input board serves as a selector switch the mode is selected on the input board buttons. The input board sends the commands to the r elay board. The relay board and the input board communicate through a ribbon connector.

## **Heat Sensor**

The PHZ hood is equipped with a heat sensor that is located inside the input boar d. It is not visible or field replaceable. The entire input board must be replaced. The sensor detects over temperature conditions and turns the fan on to protect the components. The sensor is set to activate at 165°F (75°C) and r eset at 140°F (60°C).

## Here's how it works when the sensor detects accessive heat:

- I) If the ventilator is "off," the ventilator will turn on at low speed and the corresponding LED will blink.
- 2) If the v entilator is "on" at any speed, the corresponding LED will blink. No speed change will occur.

## While the sensor is activated due to excessive heat:

- I) The ventilator speed can be changed or turned off and the corresponding LED will blink.
- 2) All lights will remain operational.
- 3) When the sensor r esets back to 140°F, the control will continue to operate at the existing setting though the LED will stop blinking, indicating there is no longer an over temperature condition.

#### Fault code:

The circuit is equipped with an alarm indicating that the heat sensor protection is not working due to a damaged sensor. In this case, the three speed indicator LED's will start blinking.

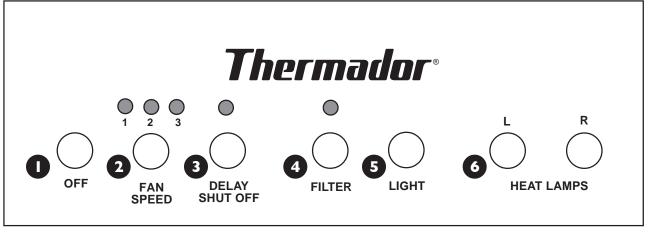

## **Hood Operating Instructions**

The blower should be turned on 6r about 5 minutes **before** cooking in or der to establish air cur rents upward through the hood. Thus when heat, smoke, moisture, grease and cooking odors ar e produced, they will be carried outside instead of drifting into

other rooms. Use the low speeds for normal use and the higher speeds for strong odors or fumes.

Drafts across the range or cooktop will reduce the effectiveness of the hood. Such drafts should be prevented when possible.

#### **CONTROL PANEL**

- OFF BUTTON Pressing button once turns ventilator off and resets control.
- FAN SPEED BUTTON Pressing button once, from an off state, turns the ventilator on low. Each successive press of the button incr eases the fan speed until high wher e the fan cycles back to the low speed.
  - The LEDs above this button indicate the current fan speed. When the fan is on, the corresponding LED is illuminated.
    - I Low
    - 2 Medium
    - 3 High
- 3 DELAY SHUT OFF BUTTON
  - Press to turn fan on high for 10 minutes.

If the ventilator is off when the delay button is pressed, the ventilator will turn on to the high speed setting for 10 minutes. At the end of the cycle the ventilator will turn off.

If the ventilator is on when the delay button is pressed, the ventilator runs for 10 minutes at the current speed then turns off.

 During a timed period, the LED above the Delay Shut Off button is illuminated. • To interrupt a timed period, press Fan Speed or Off button.

CLEAN FILTER REMINDER – After 40 hours of operation the clean filter eminder LED above this button will illuminate indicating that the filters need to be cleaned. Pressing this button for 3 seconds r esets the 40-hour period and turns the LED off.

LIGHT On/Dim/Off –This button controls the halogen lighting. The first press turns the lights on. A second press dims the lights. A third press turns the lights off.

HEAT LAMP BUTTONS – The buttons marked "L" and "R" independently control the left and right infrared heating lamps, turning the lights on or off.

## **Cleaning Instructions**

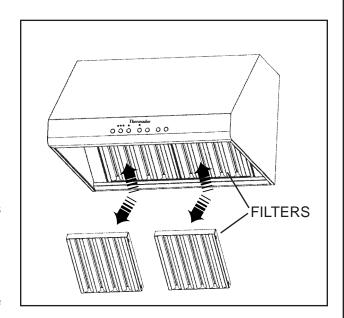

Be sure lights are cool before cleaning the hood.

#### **To Clean Filters**

- When the filter reminder illuminates, the filters and grease troughs should be cleaned. When used over a grill, more frequent cleaning may be required.
- The filters can be washed by hand or in the dishwasher.

#### **To Clean Hood Surface**

- For general care, wipe the outside of the stainless steel with sudsy water or household cleaners such as Fantastic<sup>®</sup> or Formula 409<sup>®</sup>. Rinse well and dry with clean soft cloth to a void water marks
- Wipe and dry brushed stainless steel in the same direction as the grain.
- Do not use abrasive products.
- To remove finger prints and give added shine use spray cleaners such as Stainless Steel Magic<sup>®</sup> and Shimmer<sup>®</sup>.

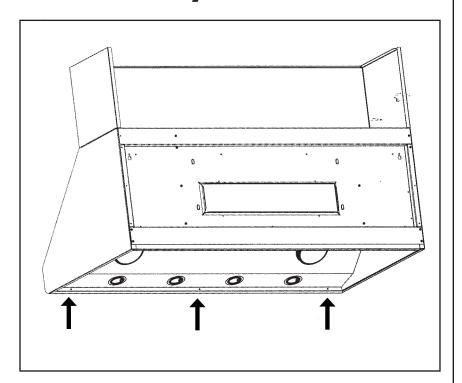

PHZ Service Manual Disassemby

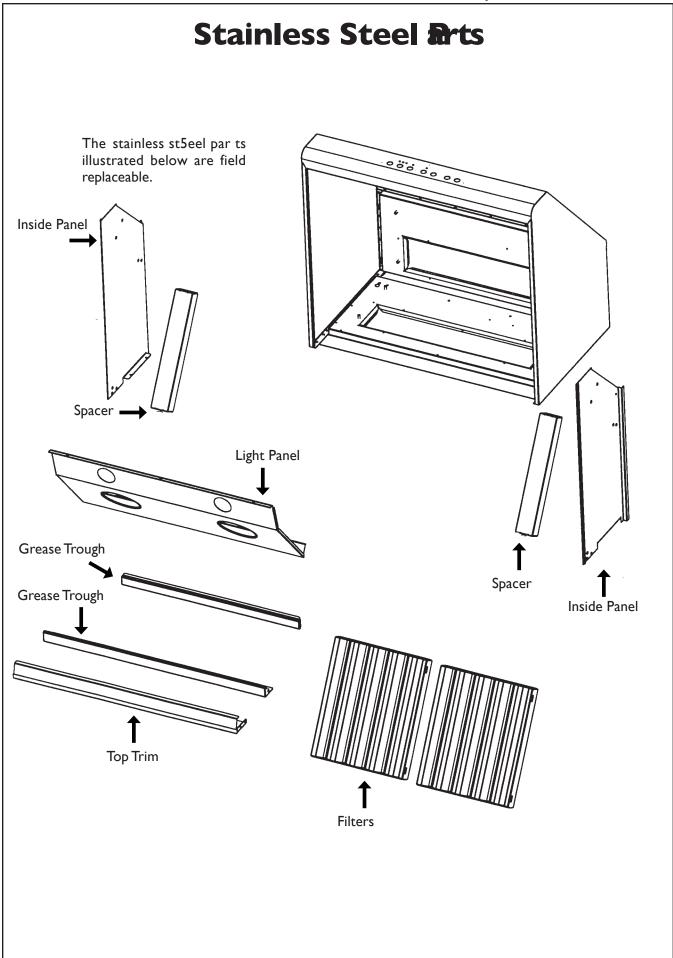

## **DisassemBy**

The halogen lights and infra r ed lights are mounted on the light panel.

## To drop light paneland gain access to components;

 Remove 3 screws as illustrated and drop the light panel.

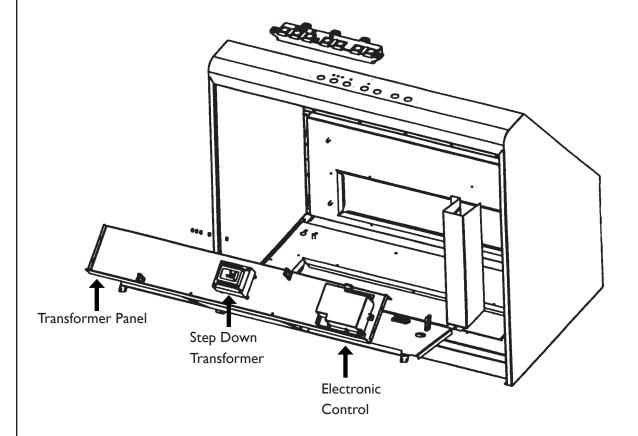

## Transformer Panel Remoral

The step down transformer, electronic control and wire harness are mounted on the transformer panel.

## To remove the transfermer panel and gain access to these components;

- 1) Lower the light panel.
- 2) Remove 4 screws that attach the transf ormer panel to the sides of the hood. (see illustration).

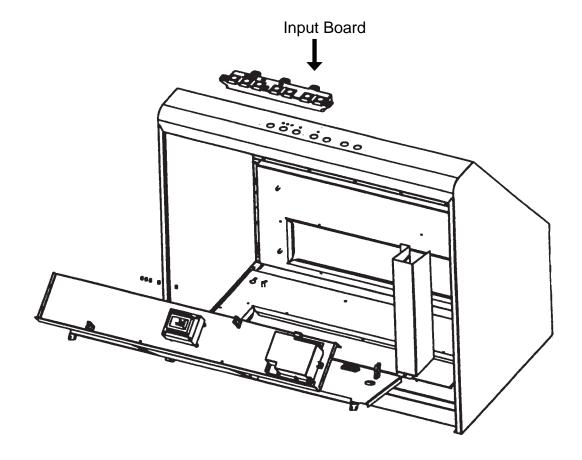

PHZ Service Manual InputBoard Removal

## **Input Boad Removal**

The input boad is mounted on the inside of the hood.

#### To remove the input boat:

- 1) Remove light panel.
- 2) Remove (4) number 9 hex head nuts that attach the input board to the hood. (see illustration),

### THERMADORHOOD WARRANTY

#### **FULL ONEYEARWARRANTY**

Covers one year from date of installation, or date of occupancy on a new, or previously unoccupied dwelling. Save your dated receipt or other evidence of installation/ occupancy date.

#### Thermador Will Pay For:

All repair labor and replacement parts found to be defective due to materials and workmanship.

Service must be provided by a Factory Authorized Service Agency, during normal w orking hours. For a Service Agency nearest you, please call 800/735-4328.

#### Thermador Will Not Pay For:

- I. Service by an unauthorized agency Damage or repairs due to service by an unauthorized agency or the use of unauthorized parts.
- 2. Service visits to:
  - Teach you how to use the appliance.
  - Correct defects or repairs due to improper installation. You are responsible for providing electrical wiring and other connecting facilities.
  - Reset circuit breakers or replace home fuses.
  - Damage caused from accident, alteration, misuse, abuse, improper installation or installation not in accordance with local electrical codes or plumbing codes, or improper storage of the appliance.
  - Service labor during limited warranty period.
  - Travel fees and associated charges incurred when the product is installed in a location with limited or restricted access. (i.e., airplane flights, ferry charges, isolated geographic regions).
  - Repairs due to other than normal home use.

This warranty applies to appliances used in residential applications; it does not cover their use in commercial installations.

The warranty is for products purchased and retained in the 50 states of the U.S.A., the District of Columbia and Canada. Should the appliance be sold by the original purchaser during the warranty period, the new owner continues to be protected until the expiration date of the original purchaser's warranty period. Products for use in Canada must be purchased through the Canadian distribution channel to ensue regulatory compliance and warranty coverage

This warranty gives you specific legal rights. You may also have other rights which vary from state to state.

#### **HOW TO OBTAIN SERVICE**

- Contact the Factory Authorized Service Agent in your area.
- Contact the Dealership where you purchased the appliance.
- Call the Thermador Customer Support Call Center at 800-735-4328.
- Write us to at:Thermador 5551 McFadden Avenue, Huntington Beach CA, 92649.
